

WANDERERS, UFOs, AND THE COSMIC PLAN

Study Group/Seminar Notes: The Law of One (RA Material, vol. I-IV)

Recorded by Scott Mandelker, Ph.D.

A. INTRODUCTION TO THE WANDERERS

1. Universal Service

“Imagine the sands of your shores. As countless as the grains of sand are the sources of intelligent infinity. When a social memory complex has achieved its complete understanding of its desire, it may conclude that its desire is service to others with the distortion towards reaching their hand, figuratively, to any entities who call for aid. These entities whom you may call Brothers and Sisters of Sorrow move toward this calling of sorrow. Entities are from all reaches of infinite creation, bound together by desire to serve in Earth’s 3D.”

2. Total Numbers

“The number is approximate due to an heavy influx of those birthed at this time due to an intensive need to lighten the planetary vibration and thus aid in harvest. Number approaches 65 million.

“Approximately 60-65 million -- but there is some excess to that amount. [Harvestable entities coming for 4D+ experience] is a recent phenomenon and the number is not yet in excess of 35,000 entities.

3. Historical Dynamics

“[There have been a few Wanderers on Earth for the past 50,000 years] and many more which chose to join this last cycle of 25,000 years and many, many more which have come for harvest”.

“Wanderers incarnated in several waves [in Industrial Revolution], in order to bring into existence the gradual freeing from the demands of the diurnal cycles and lack of freedom of leisure”.

a. Abraham Lincoln -- “Entity was a normal Earth being which chose to leave the vehicle and allow an entity to use it on a permanent basis. This is relatively rare compared to phenomenon of Wanderers.

[Entity who used Abraham Lincoln’s body was 4D positive. Assassination was Orion influenced]

b. Thomas Jefferson and Benjamin Franklin (notions of liberty, justice, human rights; inventions)

c. Nikola Tesla -- “Received information from Confederation sources desirous of aiding this extremely, angelically positive entity in bettering the existence of its fellow m/b/s complexes. It is unfortunate, that like many Wanderers, vibratory distortions of 3D illusion caused this entity to become extremely

distorted in its perceptions of its fellow m/b/s complexes so that its mission was hindered and perverted from its purposes.

“Most desired purpose of Nikola was the freeing of all planetary entities from the darkness -- He attempted to give to the planet the infinite energy of planetary sphere for use in lighting and power = freeing people from darkness in a literal sense. // The product of such a freeing would create two experiences:

- i. Experience of no need to find necessary emolument for payment/your money, for energy.
- ii. Leisure afforded, thereby exemplifying the possibility and enhancing the probability of the freedom to then search the self, the beginning of seeking the Law of One.

4. Death and Contract Length

“[Wanderers in 3D time/space after death] will depend upon plan which has been approved by Council of Nine. Some Wanderers offer themselves for one incarnation while others offer themselves for varying lengths of time up to and including the last two cycles of 25,000 years. If the agreed-upon mission is completed the Wanderer’s mind/body/spirit complex will go to the home vibration.

5. Density Origins / Danger

“Few there are of 4D. Largest number of Wanderers are of 6D. Desire to serve must be distorted towards great deal of purity of mind and ‘foolhardiness or bravery’, depending upon your judgment. The Wanderers’ challenge/danger is that it will forget its mission, become karmically involved, and be swept into maelstrom of which it had incarnated to avert the destruction -- An entity which acts in a consciously unloving manner in action with other beings can become karmically involved”.

6. Cause/Nature of Forgetting

“Reason is twofold: a. Genetic properties of connection between m/b/s complex and cellular structure of body is different for 3D than for 3D-4D

b. Free will of 3D entities needs be preserved. Thus Wanderers volunteer for 3D genetic or DNA connections to m/b/s complex. Forgetting process can be penetrated to extent of Wanderer remembering what it is and why it is upon the planet. However, it would be an infringement if Wanderers penetrated forgetting so far as to activate more dense bodies and thus be able to live in a god-like manner. This would not be proper for those who have chosen to serve.

7. Percentage of Awakening

“We can approximate percentage of those intelligently penetrating their status: 8.5% -- 9.75%. There is a larger percentile group of those who have a fairly well

defined symptomology indicating to them they are not of this “insanity.” This amounts to >50% of remainder. Nearly 1/3 of remainder [15%] are aware something about them is different, so there are many gradations of awakening to knowledge of being a Wanderer. It is to the middle and first group that this information will make sense”.

8. Wanderers 3D Problems

“Due to the extreme variance between the vibratory distortions of third density and those of the more dense densities, if you will, Wanderers have as a general rule some form of handicap, difficulty, or feeling of alienation which is severe. The most common of these difficulties are alienation, the reaction against the planetary vibration by personality disorders, as you would call them, and body complex ailments indicating difficulty in adjustment to the planetary vibrations such as allergies, as you would call them”.

“Possibility of such problems due to 6D incarnating in 3D is rather large. Not necessarily a problem -- it depends upon unique orientation of each m/b/s complex having this situation or placement of energies.”

“There are, in case of Wanderers, not only a congenital difficulty in dealing with 3D vibratory patterns but also a recollection, however dim, that these distortions are not necessary or usual in home vibration.

9. Wanderers and Intimacy

“4D Wanderers, of which there are not many, tend to choose entities which seem full of love or in need of love. There is great possibility of making errors in judgment due to compassion with which others are seen.

“5D Wanderers are not tremendously affected by stimulus of various rays of other-self and offers themselves in their own way when a need is seen. Such entities are not likely to engage in marriage, are very likely to feel aversion to childbearing and child-raising due to awareness of impropriety of planetary vibrations relative to harmonious vibrations of 5D.

“6D Wanderers means of propagation is fusion, is likely to refrain, to a great extent, from bisexual reproductive programming of bodily complex and instead seek out those with whom sexual energy transfer is of complete fusion nature in so far as possible”.

6D Fusion -- “Entire creation is of the One Creator. Thus, division of sexual activity into simply that of bodily complex is an artificial division, all things thusly being seen as sexual equally, m/b/s; all of which are part of entity’s polarity. Sexual fusion may be seen with or w/o ‘sexual intercourse’ to be complete melding of m/b/s in what feels to be constant orgasm of joy and delight each in the other’s being-ness”.

B. WANDERERS AND HUMAN EVOLUTION

1. Human Soul Origins

“Soul-transfer has been gradual. Over 2 billion are of Maldek which have successfully made transition.

“Approx. 1.9 billion souls have, from many portions of creation, entered into this experience at various times. Remainder / approx. 2 billion are those who have experienced first two cycles upon Earth [Mars?] or who have come in at some point as Wanderers; some Wanderers having been here for many thousands of years; others have come far more recently”.

2. Earth 4D Harvest: Introduction

“The fourth density is as regularized in its approach as the striking of a clock upon the hour. The space/time of your solar system has enabled this planetary sphere to spiral into space/time of a different vibrational configuration. This causes the planetary sphere to be able to be molded by these new distortions. However, the thought-forms of your people during this transition period are such that the mind/body/spirit complexes of both individual and societies are scattered throughout the spectrum instead of becoming able to grasp the needle, shall we say, and point the compass in one direction.

“Thus, entry into the vibration of love, the vibration of understanding, is not effective with your present societal complex. Thus, harvest shall be such that many will repeat third-density cycle. Energies of your Wanderers, teachers, and adepts are all bent upon increasing harvest. However, there are few to harvest”.

3. Earth 4D Harvest: Esoterics

“It is misleading to speak of gains and losses when dealing with subject of cycle’s ending and green-ray cycle beginning upon your sphere. It is to be kept in the forefront of intelligence that there is one creation in which there is no loss. There are progressive cycles for experiential use by entities.

“Among planetary harvests which yield harvest of m/b/s complexes approx. 10% are negative; approx. 60% are positive; and approx. 30% are mixed with nearly all harvest being positive. In the event of mixed harvest it is almost unknown for the majority of the harvest to be negative. When a planet moves strongly towards the negative there is almost no opportunity for harvestable positive polarization”.

“As green-ray cycle or density of love and understanding begins to take shape, yellow-ray plane or Earth will cease to be inhabited for some period of your space/time as the space/time necessary for 4D entities to learn their ability to shield their density from that of 3D is learned. After this period there will come a time when 3D may again cycle on the yellow-ray sphere.

“Meanwhile there is another sphere, congruent to a great extent with yellow ray, forming. This 4D sphere coexists with 1D, 2D, 3D. It is of denser nature due to rotational core atomic aspects of its material.

“Positively oriented harvested entities will remain in this planetary influence but not upon this plane”.

4. Wanderers and Harvest

“Overriding reason for offering of Brothers and Sisters of Sorrow in incarnative states is possibility of aiding others by lightening planetary consciousness distortions and probability of offering catalyst to others which will increase harvest.

“In the chance to remember that which has been lost in forgetting there is a nimity of opportunity for positive polarization. There are several reasons for incarnation during harvest: divided by self / other --

Two other reasons for choosing this service which have to do with self:

a. “The Wanderer, if it remembers and dedicates itself to service, will polarize much more rapidly than is possible in the far more etiolated realms of higher density catalyst.

“Wanderer has potential of greatly accelerating density whence it comes in its progress in evolution. This is due to intensive life experiences and opportunities of 3D. Positively oriented Wanderers choose to hazard danger of forgetting to be of service to others by radiating love of others. If forgetting is penetrated, amount of catalyst in 3D will polarize Wanderer w/ much greater efficiency than shall be expected in higher, more harmonious densities.

b. “Final reason is within the m/b/s totality or social memory complex totality which may judge that an entity or members of a societal entity can make use of 3D catalyst to recapitulate a learning which is adjudged to be less than perfect. This especially applies to those entering into and proceeding through 6D wherein balance between compassion and wisdom is perfected”.

5. Wanderers’ Service at Harvest

“[Service] is the intention which Wanderers had prior to incarnation. There are many Wanderers whose dysfunction WRT planetary ways of your peoples have caused, to some extent, a condition of being caught up in a configuration of mind activity which, to the corresponding extent, prohibits intended service.

“ It was the aim of Wanderers to serve the entities of this planet in whatever way was requested and it was also the aim of Wanderers that their vibratory patterns might lighten planetary vibration as a whole, thus ameliorating effects of planetary disharmony and palliating results of this disharmony.

“Specific intentions such as aiding in a situation not yet manifest are not the aim of Wanderers. Light and love go where they are sought and needed, and their direction is not planned aforesomes.

“Each Wanderer has unique abilities, biases, specialties so that from each portion of each D represented among Wanderers come array of pre-incarnative talents which may be expressed so that each Wanderer, in offering itself before incarnation, has some special service to offer in addition to the doubling effect of planetary love/light [vibrations adding to the planet just as electrical polarity or charging a battery] and basic function of serving as beacon or shepherd.

“There are those of 5D whose abilities to express wisdom are great. There are 4D and 6D Wanderers whose ability to serve as passive radiators or broadcasters of love and love/light are immense. There are many others whose talents brought into 3D are quite varied.

“Thus Wanderers have three basic functions once forgetting is penetrated: first two being basic, the tertiary one being unique to that particular m/b/s complex”.

6. Wanderers' Forgetting and Service

a. As Infant -- “You may see Wanderer as infant attempting to verbalize sound complexes. Memory of ability to communicate is within infant's undeveloped mind complex, but ability to practice or manifest speech is not immediately forthcoming due to limitations of m/b/s complex it has chosen in this experience.

b. Re. Healing -- “So it is with the Wanderer which, remembering ease with which adjustments can be made in home D, yet still having entered 3D, cannot manifest memory due to limitation of chosen experience. Chances of a Wanderer being able to heal in 3D are only more than those native to 3D because desire to serve may be stronger and this method of service chosen”.

c. Re. Adept Work -- “There are many Wanderers whom you may call adepts who do no conscious work in present incarnation. It is a matter of attention. One may be a fine catcher of a ball, but if eye is not turned as the ball is tossed then it will pass the entity by. If it turned its eyes upon the ball, catching would be easy. In the case of Wanderers which seek to recapitulate the degree of adeptness which each had acquired previous to this life experience, even after forgetting process has been penetrated there is still the yellow activated body which does not respond as does the adept which is of a green- or blue-ray activated body. You may see inevitability of frustrations and confusion due to inherent difficulties of manipulating finer forces of consciousness through chemical apparatus of yellow-ray activated body”.

7. ET Youth/Dual-Activation

“These entities are those incarnating with what you may call a double body in activation. Entities birthing these 4D entities experience a great feeling of connection and use of spiritual energies during pregnancy. This is due to the necessity for manifesting double body.

“This transitional body will be able to appreciate 4D vibratory complexes as in-streaming increases without accompanying disruption of 3D body. If a 3D

entity were electrically aware of 4D in full, 3D electrical fields would fail due to incompatibility.

“These [3D] entities will die according to third-density necessities -- the 3D/4D combination body will die according to the necessity of 3D mind/body/spirit complex distortions.

“Purpose of such combined activation of m/b/s complexes is that such entities, to some extent, are conscientiously aware of those 4D understandings which 3D is unable to remember due to the forgetting. Thus 4D experience may be begun with the added attraction to an entity oriented toward service-to-others of dwelling in a troubled 3D environment and offering love and compassion.

[Purpose in transitioning to Earth prior to complete changeover is experience gained here before harvest]

“These entities are not Wanderers in the sense that Earth is their 4D home planet. However, experience of this service is earned only by those harvested 3D entities which have demonstrated a great deal of orientation towards service-to-others. It is a privilege to be allowed this early an incarnation as there is much experiential catalyst in service to other-selves at this harvesting.

“4D entities which incarnate at this space/time are 4D in the view of experience but are incarnating in less dense vehicles due to desire to experience and aid in the birth of 4D upon this plane.

“4D entities have a great abundance of compassion.

“[Children demonstrating mental metal bending ability, 4D phenomenon, are double-bodied souls; can do so due to 4D body -- vs. other 5D/6D Wanderers who cannot] Wanderers are 3D activated in m/b/s and are subject to forgetting which can only be penetrated with disciplined meditation and working.

[Reason for this is since entities of harvestable 3D are coming late enough so they won't affect polarization through their teachings, until transition is well advanced. They are not infringing upon first distortion because they are children. However, older Wanderers have greater ability to affect polarization, and must do their affecting as function of their ability to penetrate forgetting in order to be within first distortion]

“Any entity who, by accident or by careful design, penetrates intelligent energy's gateway may use the shaping powers of this energy [i.e. metal bending]”.

[As transition continues into 4D activation, in order to inhabit 4D sphere it is necessary for all 3D physical bodies to go through death. 4D sphere now being populated by dual-bodied souls]

C. WANDERERS AND THE ET CONFEDERATION // ORION

1. Wanderers and Confederation Contact

"Methods used to awaken Wanderers are varied -- center of each approach is entrance into conscious and subconscious in such a way as to avoid causing fear and to maximize potential for an understandable subjective experience which has meaning for the entity. Many such occur in sleep, others in the midst of many activities during waking hours. Approach is flexible, does not necessarily include Close Encounters.

"Subconscious expectations of entities cause nature and detail of thought-form experience offered by Confederation thought-form entities. If Wanderer expects physical examination, it will be experienced with as little distortion towards alarm or discomfort as allowable by nature of expectations of the subconscious.

[Confederation craft contact generally is thought-form; Wanderer-Confederation landed-craft contact is rare]

[Confederation] thought-form experiences are subjective and, for the most part, do not occur in this D.

2. Examples of Awakening Contact

"Most efficient mode of contact is that which you experience at present -- infringement upon free will is greatly undesired. Wanderers are the only subjects for thought projections which make up "Close Encounters" and meetings between positively oriented social memory complexes and Wanderers.

"One such example of which you are familiar is that of the one known as Morris¹. In this case, previous contact which other entities in this entity's circle of friends experienced was negatively oriented. However, Morris was impervious to this contact and could not see it.

"However, its inner voice alerted Morris to go by itself to another place and there an entity with thought-form shape and appearance of the other contact appeared and gazed at him, thus awakening in him the desire to seek truth of this occurrence and of the experiences of its incarnation in general.

"Feeling of being awakened or activated is the goal of this type of contact. Duration and imagery used varies depending upon subconscious expectations of Wanderer experiencing opportunity for activation".

3. Wanderers and Orion Contact

"Wanderers become completely the creature of third density in mind/body complex. There is just as much chance of [Orion] influence to a Wanderer entity as to a m/b/s complex of this planetary sphere. Only difference occurs in spirit complex which, if it wishes, has an armor of light, which enables it to recognize more clearly that which is not as it would appropriately be desired. This is not more than bias and cannot be called an understanding.

¹ This refers to CASE #1 in *Secrets of the UFO* by D. T. Elkins with Carla L. Rueckert, Louisville, L/L Research, 1976, pp 10-11.

“Furthermore, the Wanderer is, in its own m/b/s, less distorted toward deviousness of 3D positive/negative confusions. Thus, it often does not recognize as easily as a more negative individual the negative nature of thoughts or beings. [Wanderers are high-priority targets of the Orion group]

“If Wanderer demonstrated through action a negative orientation towards others it would be caught into the planetary vibration and, when harvested, possibly repeat master cycle of 3D as a planetary entity”.

“When [Wanderer-Orion contact] occurs it is quite rare and occurs either due to Orion entities’ lack of perception of depth of positivity to be encountered or due to Orion entities’ desire to attempt to remove this positivity from this plane of existence. Orion tactics normally are those which choose simple distortions of mind which indicate less mental and spiritual complex activity”.

4. Orion Abduction/ Contacts

“[Physical examination] used as a means of terrifying individual and causing it to feel feelings of an advanced 2D being such as laboratory animal. Sexual experiences of some are sub-type of this experience -- intent is to demonstrate control of Orion entities over Terran inhabitant.

“Preponderance of Human-ET contacts is Orion-oriented -- most typical approach of Orion is to choose weaker-minded entity that it might suggest a greater amount of Orion philosophy to be disseminated.

“Some few Orion entities are called by more highly polarized negative entities of your space/time nexus. In this case they share information just as we do. However, there is a risk for Orion entities due to frequency with which harvestable negative planetary entities attempt to bid/order Orion contact just as these entities bid planetary negative contacts. Resulting struggle for mastery, if lost, is damaging to Orion group polarity.

“Similarly, a mistaken Orion contact with highly polarized positive entities can wreak havoc with Orion troops unless crusaders able to de-polarize entity mistakenly contacted. This occurrence is almost unheard-of. Therefore, Orion group prefers to make physical contact only with weaker-minded entities”

5. Negative 6D Wanderers

“Similarly [to positive-Wanderer], negatively oriented Wanderer dares to hazard forgetting in order that it might accelerate progress in evolution in its own D by serving itself in 3D by offering to other-selves opportunity to hear the information having to do with negative polarization”.

“Once the negatively polarized entity has reached a certain point in the wisdom density it becomes extremely unlikely that it will choose to risk the forgetting, for this polarization is not selfless but selfish and with wisdom realizes the jeopardy of such “Wandering.” Occasionally a 6D- becomes a Wanderer in an effort to continue to polarize towards the negative. This is extremely unusual”.

6. Assessing ET Contacts

“If there is fear and doom, contact was quite likely negative. If result is hope, friendly feelings, and awakening of positive feeling of purposeful service to others, marks of Confederation contact are evident”

D. HIGHER DENSITY EVOLUTION

1. Positive/Negative 4D/5D Work in Consciousness

Intro -- “There is very little work in consciousness in 4D and 5D compared to work done in 3D. The work that is accomplished in 4D+ is that work whereby the positive social memory complex, having, through slow stages, harmoniously integrated itself, goes forth to aid those of less positive orientation which seek their aid. Their service is their work and through this dynamic between societal self and others, which are the object of love, greater and greater intensities of understanding or compassion are attained. This intensity continues until the appropriate intensity of the light may be welcomed. This is 4D harvest.

a. In 4D+ “There are minor amounts of catalyst of spiritual and mental complex distortion. This occurs during process of harmonizing to the extent of forming social memory complex. This causes some small catalyst and work to occur, but great work of 4D is contact betwixt societal self and less polarized others.

b. In 4D- “Much work is accomplished during fighting for position which precedes period of social memory complex. There are opportunities to polarize negatively by control of others. During social memory complex period of 4D-, situation is same. Work takes place through societal reaching out to less polarized others in order to aid in negative polarization.

In 5D -- “5D positive and negative: concept of work done through a potential difference is not particularly helpful as 5D entities are intensifying rather than potentiating.

c. In 5D+ “5D complex uses 6D teach/learners to study more illuminated understandings of unity thus becoming more and more wise. 5D+ social memory complexes choose to divide their service to others in two ways: 1. beaming of light to creation; 2. sending of groups to be of aid as instruments of light such as those whom you are familiar with through channels.

d. In 5D- “Service to self has become extremely intense and self has shrunk/compacted, so dialogues with teachers are used exclusively in order to intensify wisdom. There are very, very few 5D- Wanderers: they fear forgetting. There are very, very few 5D Orion members: they no longer perceive any virtue in others”.

2. Guardians and the Next Octave

“This octave density is both omega and alpha, the spiritual mass of the infinite universes becoming one central sun or Creator again. Then is born a new universe, new infinity, new Logos which incorporates all the Creator has experienced of Itself. In this new octave there are also those who wander. We know very little across octave boundary except these beings come to aid our octave in its Logos completion”.

E. RA's SPIRITUAL EVOLUTION

1. RA's Attitude Towards Human Harvest

“[Different attitude toward unharvestable Earth entities?] Not substantially. To those who wish to sleep we could only offer comforts designed for sleeping. Service is only possible to extent it is requested. We were ready to serve in whatever way we could. This still seems satisfactory as a means of dealing with others in 3D. To be each entity which one attempts to serve simplifies grasp of what service is necessary/possible”.

2. RA's 3D Harvest: +/-

“We had no negative harvest as such although there had been two entities which had harvested themselves during 3D in negative or service-to-self path. There were, however, those upon the planetary surface during third density whose vibratory patterns were in the negative range but were not harvestable.

“We were a small population which dwelt upon what you would consider difficult conditions. Our harvest was approximately 6 million 500 thousand, with approx. 32 million beings repeating 3D elsewhere.

“Those of us which had gift of polarity felt deep compassion for those who seemed to dwell in darkness. This description is most apt as ours was a harshly bright planet in physical sense. There was every attempt made to reach out with whatever seemed to be needed. However, those upon positive path have comfort of companions and we of Ra spent a great deal of our attention upon possibilities of achieving spiritual or metaphysical adepthood or work in indigo ray through means of relationships with others. Consequently, compassion for those in darkness was balanced by the appreciation of light”.

3. Story of RA's 3D Wanderers: Mistaken Negative Harvest

“[They used] ...technique of control over others and domination unto the physical death in both cases. Upon a planetary influence much unused to slaughter these entities were able to polarize by this means. Upon your 3D environment such entities would merely be considered ruthless despots, waging holy war.

“These entities were Wanderers from early 5D+ [and switched polarity reincarnating into 3D]

“[Catalyst for their change:] In our peoples there was what may be considered, from viewpoint of wisdom, an overabundance of love. These entities looked at those still in darkness and saw that those of neutral or somewhat negative viewpoint found such harmony sickening. The Wanderers felt a more wisdom-oriented way of seeking love could be more appealing to those in darkness.

“First one entity began its work. Quickly the second found the first. These entities had agreed to serve together and so they did, glorifying the One Creator, but not as they intended. About them were soon gathered those who found it easy to believe that a series of specific knowledges and wisdoms would advance one towards the Creator. End of this was graduation into 4D- of the Wanderers, which had much power of personality, and some small deepening of the negatively polarized element of those not polarizing positively. There was no negative harvest as such.

“They were indeed incarnated male and female as this is by far the most efficient system of partnership.

“Before incarnation it was the desire of these Wanderers only to aid in service to others; within that incarnation, they wished to seed greater wisdom in what they saw as an overabundance of compassion.

“It was in the second cycle of 25,000 years. We had a harvest of 6 out of 30, to speak roughly, of millions of m/b/s complexes, less than 20%. Wanderers are always drawn to whatever percentage has not yet polarized, and come when there is a call. There was a call from those which were not positively polarized as such but which sought to be positively polarized and sought wisdom, feeling the compassion of others upon Venus as complacent or pitying towards others.

“They were disconcerted [after they graduated into 4D- and, veil being removed, realized they switched polarities] and then worked with 4D- for some period until, within this framework, previously learned patterns of self had been recaptured and polarity was, with great effort, reversed. There was great deal of 4D+ then to be retraced. These entities joined RA in 4D+ for a portion of the cycle we experienced”
